The U.S. forklift division stationed in Cleveland has a skilled team knowledgeable in Sales, Purchasing, Marketing, Logistical and Technical Support.

In the beginning the home-based forklift market in Korea was an open import enterprise. Korea Machinery Co. Ltd. started in 1960, to import fully assembled forklifts as part of a home-based machinery expansion venture. Product sales of these goods were initially targeted to state-run firms, large scale businesses, and the military. This eventually led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun business operations throughout Korea to service and sell this heavy equipment. By 1978, a lift truck production plant was successfully completed. Continuous technical training grew to become the new focus for improving quality and product development.

Daewoo began the first home-based lift truck business in 1967, and rapidly acquired a massive 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's advanced technological advancements combined with sales success placed them in a position of significant growth of their forklift business.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a cooperative venture project to help them in the very competitive North American materials handling industry. This joint-venture proved highly lucrative for Daewoo and their forklift product sales expanded greatly. In 1984, the company completed development of a new facility to help in producing high end value-added products for export. In 1993, the company had a global sales system and started exporting designs they had established through in-house expertise, as an independent brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion possibilities into overseas markets.
