

Aerial Work Platforms

Aerial Work Platforms - There are numerous accessories used for forklifts that can be utilized so as to help expand the capabilities of your forklift and allow you to lift items, handle materials with less effort or to complete clean-up jobs.

Lots of the attachments are specifically designed so as to fit on the blades themselves. Fork extensions for example, are used when you require much more blade length, that increases lifting capability. Blade extensions come in lengths varying from 48-120 inches. Triangular or rounded attachments are one more type used whenever transporting rolled material in order to ensure it does not roll off of the standard flat forks.

Examples of lifting attachments include pivoting and telescoping crane or boom accessories. They could come in several different kinds and are most often used for transferring poles, metal bars, lumber and different types of bulky stuff. Other attachments such as various styles of hooks and hook plates are accessible in order to pick up objects making use of a chain or sling. Magnetic lifters and slab lifters are other stuff that could be used along with hook accessories. Slab lifters are specialized attachments that are intended for lifting different materials that are delivered in a slab or sheet format. Rug rams or carpet poles are other lifting tools which attach to your forklift so as to make transferring rolls of carpet a lot easier. The attachment connects onto the lift truck's blades and has a pole which goes through the middle of the carpet roll.

There are several kinds of lift truck attachment designed for facility maintenance such as snow forks. These industrial blades could be connected to front end loaders and designed for transferring materials like mulch, snow as well as dirt. Other common cleanup accessories consist of standard sweepers and magnetic sweepers. Standard sweepers comprise a broom which the forklift blades hook onto for sweeping big spaces like for instance factory floors, parking lots and warehouse. The magnetic sweeper is similar except that it has a magnetic plate rather than bristles. The magnetic sweeper is utilized in areas where there is lots of metal debris such as on shop floors for example. Sweepers have widths as much as 60 inches and this surface area makes clean up effortless and quick.

Material spreaders are other accessories utilized on forklifts. These spreaders are useful for a range of applications like for example spreading rock salt, pellets, fertilizers, insecticides, seed and ice melt.

Another optional lifting accessory are work platforms. These can be used by a lot of different businesses on a daily basis. Platforms may vary in size from 36" x 36" to up to 60" x 60". A few models may be obtainable and are capable of folding up and storing into a smaller place. Work platforms are designed to raise employees up to an overhead location utilizing the forklift. Larger platform units have added space for workers to be able to carry tools and other necessary objects meant for the job. Often work platforms are made of steel or ploy material.
