

Fork Positioner for Forklifts

Forklift Fork Positioner - The fork positioner is actually a hydraulic apparatus which can allow the person driving to operate the lift truck without leaving the seat. They are made out of high quality materials and are intended to endure the most demanding procedures and work surroundings. Side shifting models have the added ability to be able to laterally position the entire load or the arms so as to facilitate more accurate lifting and placement in a faster and more effective way.

The fork pocket is quite unique and could enable the individual operating it to be able to safely swing the blades into position without any fear of damaging the positioning cylinders. This could allow the operator the alternative to execute independent or simultaneous fork movement, dependent upon the job requirement. For most lift trucks with non-OEM carriages, complete carriages are needed. Standard OEM carriages could be converted into fork positioners on available units.
